

CHOOSING COPPER-CLAD WIRE FOR PET CONTAINMENT

Traditional wire solutions for the pet-containment industry are largely made up of copper wire – but this isn't the best solution.

As it turns out, the ideal choice has been right under your nose since 1915.

Copper-clad steel, or CCS, first introduced more than a century ago, is ready to take over the world of modern pet-containment.

Presco offers both Pro-Line Pro-Trace High-flex ccs for open-trench installation and Pro-Trace Horizontal Drilling CCS tracer wire for directional drilling, or boring, applications.

To learn more about Presco's Pro-Line copper-clad steel wiring solutions, reach out to your National Account Manager or call customer service at **800-527-3295**
